Since I was on the phone with Cadmus this morning I asked for a preview of Arroyo Grande review. They will call me later today with a more considered answer, but the one I got so far was no showstoppers. There is a question about the modeling the state did to prove the bowl would not overflow. We will need to consider if we want the model re-run to be verified, or some other kind of QA done. This is not exactly spelled out in the SOW. But as far as completeness it seems there might be a complete package. I've accepted the call.
